FMEA Assessment for Identified Solutions

Key Process Step or Input	Potential Failure Mode	Potential Failure Effects	S E V	Potential Causes	O C C	Current Controls	D E T	R P N	Actions Recommended
What is the Process Step or Input?	In what ways can the Process Step or Input fail?	What is the impact on the Key Output Variables once it fails (customer or internal requirements)?	How Severe is the effect to the customer? (1-not severe, 10 extremely severe)	What causes the Key Input to go wrong?	How often does cause or FM occur ? 1- highly unlikely to ever occur, 10 we expect it to happen all the time)	What are the existing controls and procedures that prevent either the Cause or the Failure Mode?	How well can you detect the Cause or the Failure Mode? 1-we have excellent controls, 10-we have no controls or extremely weak controls	Risk Priority Number (SEV x OCC x DET)	What are the actions for reducing the occurrence of the cause, or improving detection?
